

# Social Distancing

www.theautismhelper.com

Coronavirus is making a lot of people sick.

One thing we can do to stay healthy and safe is practice social distancing. Social distancing means staying at home with your family and avoiding other people.

Some places we like to go like the mall, movie theater, or store may be closed. We cannot go over to our friends' houses right now. We need to stay away from other people.

When we stay home, we get less germs. We are less likely to get sick.

Social distancing is hard, but it won't last forever. Soon we will be able to see our friends again.
